Old Business:

PFAS Testing – We were required by the state of Vermont DEC to resample for PFAS in well #6 on the field where we spread sludge. The results indicated that the levels of PFAS were non-detectable. The VT DEC required us to sample the well again. This was completed last week. If the results come back favorable, we will be able to use the field this fall. If not, we will need to find an alternative method for handling our sludge.
